calliFMRFamide 5 - bluebottle fly (Calliphora vomitoria)
C.Species: Calliphora vomitoria
C.Species: Calliphora vomitoria
C.Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 17-M.r-1999
C.Accession: E44978
R.Duve, H.; Johnsen, A.H.; Sewell, J.C.; Scott, A.G.; Orchard, I.; F., Feld, J.F.; Tho Proc. Natl. Acad. Sci. U.S.A. 89, 2326-2330, 1992
A; Title: Isolation, structure, and activity of -Phe-Met-Arg-Phe-NH-2 Hearton number: A41978; MUID:92196111
A; Accession: E41978
A; Molecule type: protein
A; Residues: 1-9 < DUV>
C; Keywords: amidated carboxyl end; neuropeptide
F; 9/Modified site: amidated carboxyl end (Phe) #status experimental.

peptidylglycine monooxygenase (EC 1.14.17.3), rPAM-5 - rat (fragment)
N;Alternate names: peptidylglycine alpha-amidating monooxygenase
N;Alternate names: peptidylglycine alpha-amidating monooxygenase
C;Species: Rattus norvegicus (Norway rat)
C;Accession: A42266
C;Accession: A42266
A;Reference number: B.A; Green, C.B.; Campbell, T.A.; Stoffers, D.A.; Keutmann, H.T.; Mains, R.E.
A;Title: Alternative splicing and endoproteolytic processing generate tissue-specific fc
A;Reference number: A42266
A;Reference number: 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C; Species: Trypanosoma cruzi
C; Date: 10-Nov-1992 #sequence_revision 10-Nov-1992 #text_change 18-Jun-1993
C; Date: 10-Nov-1992 #sequence_revision 10-Nov-1992 #text_change 18-Jun-1993
C; Ccession: B60110
R; Hoft, D.F.; Kim, K.S.; Otsu, K.; Moser, D.R.; Yost, W.J.; Blumin, J.H.; Donelson, J.E. Infect. Immun. 57, 1959-1967, 1989
A; Title: Trypanosoma cruzi expresses diverse repetitive protein antigens.
A; Reference number: A60110; MUID: 89277508
A; Reference number: A60110
A; Status: not compared with conceptual translation
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: Te C < < COF>
A; Note: this is an example of a five residue tandem repeat from this protein; the actual C; Keywords: tandem repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Al

Sequence 9, Application US/09075257A

Patent No. 6074645

GENERAL INFORMATION:
APPLICANT: DIAMOND, DON JEFFREY
APPLICANT: YORK, JOANNE
TITLE OF INVENTION: IMMUNO-REACTIVE PEPTIDE CTL EPITOPES
TITLE OF INVENTION: OF HUMAN CYTOMEGALOVIRUS
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     46.9%; Score 23; DB 3; Length 8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDIUM TYPE: FLOPPY disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/075,257A
FILING DATE: 11-MAY-1998
CLASSIFICATION: 424
PRIOR APPLICATION NUMBER: US 09/021,298
FILING DATE: 10-FEB-1998
PRIOR APPLICATION NUMBER: US 08/950,064
FILING BAPLICATION DATA:
APPLICATION NUMBER: US 08/950,064

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3. Application US/08318856A

Sequence 3. Application US/08318856A

Patent No. 5972351

GENERAL INFORMATION:

APPLICANT: Adrian V.S. Hill, et al.

TITLE OF INVENTION: PLASMODIUM FALCIPARUM MHC CLASS I-

TITLE OF INVENTION: RESTRICTED CTL RPITOPES DERIVED FROM PRE-ERYTHROCYTIC STAGE

TITLE OF INVENTION: ANTIGENS (AS AMENDED)

NUMBER OF SEQUENCES: 86

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

       Peptides R90945-64 are derived from the factor VIII protein, esp. from a modified Factor VIII in which residues Ala322-Ser750, Leu1655-Arg1689, Lys1694-Pro1782 and Asp2170-Tyr2332 are deleted. The modified Factor VIII and derived peptides can be used to prevent the activity of inhibitors of factor VIII binding to von Willebrand factor, esp. antibodies, thus preventing or treating immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               target genes. The plasmid comprises a sequence encoding the test peptide, a promoter comprising the target gene, and a reporter gene bound to the promoter. The present sequence represents a specifically claimed peptide with affinity to HRE-I. The plasmids are used for screening for peptides which bind to target genes. The identified peptides can be used for the treatment of conditions associated with the inhibition of the expression the genes, and treatment of conditions
                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     novel plasmid has been developed for screening peptides which bind

The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). Y44618 to Y49066 represent sequences which are used in the exemplification of the present invention.

```

Ye6199-Ye6413 are peptides derived from conserved portions of the HIV-1 genome which bind to different HLA alleles of MHC (major histocompatibility complex) class I molecules. The peptides are used to construct targetting antiqens compiration one or more peptides bound to the corresponding MHC class I molecule, which can be used to raise antibodies. The antibody may then be used as a targetting vehicle to deliver a potentially toxic drug to its target site of action, rather than administering it systemically, which may result in adverse side effects. The invention relates to improved methods for the deasign of molecular conjugate therapeutics for the diagnosis and treatment of infections caused by pathogens with a high mutation rate (such as HIV-1). This method involves identifying conserved peptide-encoding regions among the genomes of multiple variants of a pathogen, identifying the Class I MHC molecules which occur with greatest frequency in a population of interest (e.g., human sub-populations), and determining which of the corresponding class I MHC molecules. The MHC-binding peptides and the corresponding antigens, which are in turn used to produce the corresponding antigens, which are in turn used to produce targetting antibodies. The methods may be used in localisation, quantification and in situ detection of specific peptide-MHC Class I complexes and also to detect and treat viral infection. The methods of the invention mitigate against the development of viral resistance to drugs and to the immune response, as well as providing a solution for targetting toxic compounds to destroy viruses sequestered in sites not accessible to T cells. In addition, the methods eliminate the virus, whereas current therapies only arrest viral replication. Sequence

Claim 36; Page 172; 252pp; English.

comprising peptides which comprises cancerin modulating of an operation describes cancerin modulating cancering peptides which comprises a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAS can be used for modulating nonclassical cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, canamoing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, stimulating angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherincexpressing cell, preventing or treating obesity in a mammal, stimulating central nervous system, treating a demylating drug delivery to the central nervous system, treating a demylating adhesion of increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing e.g. e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. Y60592 to Y64572 represent specifically claimed peptides, and X64573 to Y64643 and 233183 to 233186 represent sequences used in the The present invention describes cadherin modulating agents (MA) exemplification of the present invention.

They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes cadherin modulating agents (MA) comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The Mas can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating aneatasis of a cancer in a mammal, inhibiting metactasis of a poptosis in a nonclassical cadherin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expressing cell, preventing or treating obesity in a mammal, stimulating

mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. Y60592 to Y64572 represent specifically claimed peptides, and Y64573 to Y64643 and 233183 to 233186 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin, cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-12; cadherin-13; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoolin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cadherin-related neuronal receptor CAR cyclic peptide SEQ ID NO:3623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological

cc mammal, enhancing delivery of a drug through the skin of a mammal, contanting delivery of a drug to a tumour in a mammal, inhibiting a mammal, inhibiting and anammal, inhibiting and anglogenesis in a mammal, inhibiting and anglogenesis in a mammal, inhibiting anglogenesis in a mammal, inhibiting anglogenesis in a mammal, inhortang anglogenesis in a mammal, inhibiting anglogenesis in a mammal, inhibiting admission in a mammal, inhancing delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of central nervous system, in a mammal, enhancing adhesion of a mammal, or preventing pregnancy in a mammal. They can also be used for cey. enhancing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in proceeding to the present sequences used in the central and y64573 to 233186 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

WPI; 1989-127530/17. N-PSDB: N92399 New transfer vector pBFs, for HIV diagnosis -contg. promoter region of polyhedrin protein gene for slik-worm nuclear polyhedrosis virus deoxyribonucleic acid

Fig 2; page 9; 11pp; Japanese.

Transfer vectors pBFs were prepd. contg. promoter region of polyhedrin protein gene of silkworm nuclear polyhedrosis virus (NPV) recombined with HIV gene gag, pol, SOR, gpl20 or gp41 in the polylinker region of the vector. Thus, HIV antigenic protein can be produced in large amts. and used as an antigen for the diagnosis of HIV or for vaccine production.

comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    anglogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-
expressing cell, preventing or treating obesity in a mammal, stimulating
blood vessel regression in a mammal, enhancing drug delivery to the
central nervous system, treating a demyelinating neurological diseasc,
increasing vasopermeability in a mammal, enhancing adhesion of
nonclassical cadherin-expressing cells, inhibiting synaptic stability in
a mammal, or preventing pregnancy in a mammal. They can also be used for
                                                                                                                                                                                  Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-8; cadherin-12; cadherin-12; cadherin-12; cadherin; PB-co-iherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoolin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.

e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bloreactors. v60592 to v64572 represent specifically claimed peptides, and X64573 to x64573 represent specifically claimed peptides, and X64573 to x64643 and 233186 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin-7; cadherin-8; cadherin-17; cadherin-8; cadherin-12; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoclalin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.

                                                                               angiogenesis in a mammal, inducting apoptosis in a monclassical cadherin-
expressing cell, preventing or treating obesity in a mammal, stimulating
blood vessel regression in a mammal, enhancing drug delivery to the
central nervous system, treating a demyelinating neurological disease,
increasing vasopermeability in a mammal, enhancing adhesion of
nonclassical cadherin-expressing cells, inhibiting synaptic stability in
a mammal, or preventing pregnancy in a mammal. They can also be used for
or reducing scar tissue, or enhancing adhesion of foreign tissue in
mammal. They can also be used for treating e.g. psoriasis, arthritis,
age-related macular degeneration, multiple sclerosis and diabetes. The
products can also be used for treating e.g. psoriasis, arthritis,
products can also be used for treating end diabetes. The
products can also be used for treating end diabetes. The
products can also be used for and diaposis and in
bioreactors. Y60592 to Y64572 represent specifically claimed peptides,
and Y64573 to Y64643 and 233183 to 233186 represent sequences used in the
              inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

HLA-binding oligopeptide and an immuno: regulator contg it - used in

```
ö
                               This peptide is an example of a peptide which binds to a human leucocyte entigen HLA-DQ4 molecule. The peptide was isolated from a phagemid combinatorial library comprising the sequence V05953, by screening with an HLA-DQ4 molecule. The peptide is used for the treatment of autolmmune disease, or especially for treatment of viral diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion

```
conclassical cadherin-mediated functions. They can be used for e.g.
inhibiting adhesion of nonclassical-cadherin expressing cells in a
monaclassical cadherin-mediated functions. They can be used for e.g.
inhibiting adhesion of nonclassical-cadherin expressing cells in a
comman, enhancing delivery of a drug through the skin of a mammal,
comman, inhibiting metastasis of a cancer in a mammal, inhibiting
angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-
compressing cell, preventing or treating obesity in a mammal, stimulating
contral nervous system, treating a demyelinating neurological disease,
contral nervous system, treating a demyelinating neurological disease,
contral nervous system, in a mammal, enhancing adhesion of
conclassical cadherin-expressing cells, inhibiting synaptic stability in
a mammal, or preventing pregnancy in a mammal. They can also be used for
cor reducing scar tissue, or enhancing adhesion of foreign tissue in a
cor reducing scar tissue, or enhancing adhesion of foreign tissue in a
cor reducing scar tissue, or enhancing adhesion of foreign tissue in a
cor reducing scar tissue, or edection and diagnosis and in
cor mammal. They can also be used for treating e.g. psociasis, arthritis,
age-related macular degeneration, multiple sclerosis and diabetes. The
cor products can also be used for teating e.g. psociasis, arthritis,
and Y64573 to Y64643 and 233183 to 233186 represent sequences used in the
correctors. Y60592 to Y64572 represent specifically claimed peptides,
and Y64573 to Y64643 and 233186 represent sequences used in the
correctors.

The present invention describes cadherin modulating agents (WA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chancing delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting confidences in a monclassical cadherin-expressing cell, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing adusion of increasing vasopermeability in a mammal, enhancing adhesion of increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing cels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   products can also be used for detection and diagnosis and in
bioreactors. Y60592 to Y64572 represent specifically claimed peptides,

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CFAR) sequence. The MAs can be used for modulating

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

can mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing call, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

c g. enhancing or directing neurite outgrowth, facilitating wound healing

or reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis,

age-related macular degeneration, multiple sclerosis and diabetes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   products can also be used for detection and diagnosis and in
horeactors. V60502 to Y64572 represent specifically claimed peptides,
and Y64573 to Y64643 and 233183 to 233186 represent sequences used in the
exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                       New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological

A;Title: Annetocin: an oxytocin-related peptide isolated from the earthworm, Eisenia for A;Reference number: PC2021; MUID:94121660
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Molecule type: protein
A; Residues: 1-9 < CUM>
C; Comment: This protein potentiates spontaneous contractions of the gut and also pulsate
C; Keywords: amidated carboxyl end
F;1-6/Disulfide bonds: #status experimental
F;9/Modified site: amidated carboxyl end (Gly) #status experimental

"Veterninal sequence analysis of N alpha-acetylated proteins after
unblocking with N-acylaminoacyl-peptide hydrolase.",

Anal. Biochem. 199:45-50(1991).

-!-FUNCTION: THIS ENZYME CATALYZES THE HYDROLYZIS OF THE AMINO-
TERMINAL, PEPTIDE BOND OF AN N-ACETYLATED PEPTIDE TO GENERALE
AN N-ACETYLATED A AND A PEPTIDE WITH A FREE AMINO-TERMINUS.

IT PREFERENTIALLY CLEAVES OFF AC-ALA, AC-MET AND AC-SER.

-!-CATALYZIC ACTIVITY: ACYLAMINOACYL-PEPTIDE + H(2)O = ACYLAMINO
ACID + PEPTIDE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S9C; ALSO KNOWN AS THE PROLYL OLIGOPEPTIDASE FAMILY.
